

OIL & GAS SOLUTIONS

Bridgeport delivers the stainless steel fittings contractors trust for the toughest oil and gas environments. Hydrogen sulfide and other corrosive elements demand industrial-strength performance, and our stainless solutions provide reliable, code-compliant connections for power and control systems across exploration, production, refining, and storage.

STAINLESS STEEL FITTINGS

Bridgeport's stainless steel cord grips, liquidtight connectors, mesh grips, and vent plugs are purpose-built for oil and gas environments. Designed to meet stringent industry standards, they ensure safe, reliable, and code-compliant performance even under corrosive and high-vibration conditions.

CONDUIT DRAINS

Engineered for durability, these fittings safely remove condensation from enclosures and conduit runs, preventing moisture buildup and protecting system integrity.

STAINLESS STEEL LIQUIDTIGHT CONNECTORS

Built for wet, dry, and hazardous locations, these connectors seal out dust, dirt, oil, water, chemicals, and other corrosive elements ensuring long-lasting, code-compliant protection in oil and gas environments.

STAINLESS STEEL CORD GRIPS

Featuring a Type 304 stainless steel body and compression nut, these cord grips deliver exceptional tensile strength and superior endurance in corrosive environments. Each connector includes a Buna-N O-ring for a watertight seal, and sizes 3/8" to 3" can be equipped with stainless steel wire mesh grips for added strain relief and vibration resistance.

WIRE MESH GRIPS

Rugged mesh grips provide reliable strain relief, protecting against pullout and cable fatigue to prevent costly power failures.

Available on sizes 3/8" to 3", stainless steel wire mesh grips add an extra layer of strain relief absorbing movement and vibration to reduce cable fatigue and protect against pullout in demanding oil and gas environments.

STAINLESS STEEL CABLE AND CONDUIT SUPPORTS.

USS-6171. UCSS-series, and 2100-S series.
