OVERCOME OVERSIGHTS WITH PROVEN SOLUTIONS

**Avoid Costly Installation Mistakes –
Get It Right the First Time!**

Even the best electricians and apprentices can run into challenges in the field—forgetting a grounding bushing, struggling with conduit alignment, or realizing too late that an enclosure isn't properly bonded. These small mistakes can lead to failed inspections, rework, or unsafe installations.

Bridgeport has the solutions you need to fix these issues fast and prevent them from happening in the first place. Our innovative fittings and connectors help installers work smarter, stay code-compliant, and avoid costly rework.

**With 100 years of trusted innovations,
our products get the job done.**

PROBLEM-SOLVING PRODUCTS FOR COMMON INSTALLATION CHALLENGES

AVOID EXPENSIVE DOWNTIME

SPLIT GROUNDING BUSHINGS

Need to install a grounding bushing? No problem. Our split design allows for easy installation after the fact, eliminating longer rework and delays.

SPLIT NON- METALLIC BUSHINGS

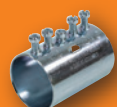

Skipping a plastic bushing can get flagged by inspectors. Our tool-free, split bushing design installs securely after conductors are in place—no cutting, gluing, or shortcuts required.

FAST & ACCURATE INSTALLATION

SLIP EMT COUPLINGS & CONNECTORS

Now conduit runs can be securely aligned before they go up. Our slip couplings provide an easy, UL-listed solution for joining multiple rows of EMT—no more time wasted spacing, connecting and securing racks overhead.

UL-LISTED OUTDOOR APPLICATIONS

RAINTIGHT SEALING REDUCING WASHERS

Traditional reducing washers are not meant for outdoor use. Our coated washers provide a robust, UL-Listed Outdoor solution for smaller size raceways connected to larger size knockouts.

REDUCE MATERIAL & INSTALLATION TIME

UNIVERSAL STRAPS

Running out of the right strap can cause costly delays. Our Universal Conduit Straps (UCS series) are listed for all electrical conduits and MC cable. Designed for two trade sizes with a large cable range these UCS straps require only one fastener, saving material and installation time in the field.

CODE COMPLIANCE MADE EASY

GROUNDING & BONDING SOLUTIONS

From intersystem bonding to properly grounding enclosures, our MC, MCC, IGB, and MBG series ensure compliance where standard cable fittings are not listed. These solutions provide the proper ground path required for electrical and communications equipment.

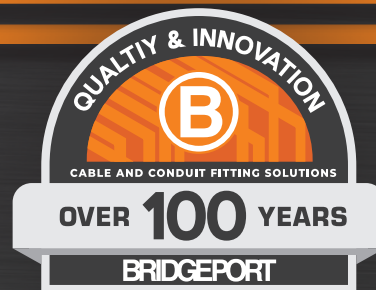

ELIMINATE THREAD LENGTH ISSUES

INSULATED GROUNDING LOCKNUTS

Not enough thread length for a grounding bushing? Our insulated grounding locknut's replace standard locknut's and ensure proper grounding without additional threads.
