6. Insert **VERTICAL GATE DOOR** POST (B) into CORNER **ELBOW (C).** Then slide in the HORIZONTAL GATE DOOR **POST (C)** into the **CORNER ELBOW (C)** so that it presses tightly against the VERTICAL **POST (B)**. Secure the **POSTS** inside the **CORNER ELBOWS** (C) using SELF-TAPPING SCREWS (J). Finally, attach the **CENTER BAR (D)** on both sides of the VERTICAL GATE POSTS (B) with an END CLAMP (D) on either end. Secure the END CLAMP (D) in place with a **CARRIAGE** BOLT (K) on the CENTER of each VERTICAL GATE POST (B).

Note: The CARRIAGE BOLT (K) that secures the CENTER BAR (D) DOES NOT go through the bar itself. The CENTER BAR (D) rests against the CARRIAGE BOLT (K) and secures the two pieces of the END CLAMP (D).

 On one side of the newly assembled gate door, measure 12" from the TOP and 12" from the BOTTOM of the door. Attach the FEMALE HINGE (G) at these marked points with a CARRIAGE BOLT (L). On the opposite side of the gate door, attach the FORK LATCH (H) at the same height as the FEMALE HINGES (G); 12" from the TOP and 12" from the BOTTOM.

**Note:** You can attach the hinges and latches to either side of the door frame to accommodate which way it will open in the system.

9. Attach the MALE HINGES (F) to one side of the **FRAME POST (N)** and secure them with a **CARRIAGE BOLT (L)**. Do not tighten the bolts completely. Position the GATE DOOR on the INSIDE of the FRAME POSTS (N) at the desired height, then slide the MALE HINGES (F) up into the FEMALE HINGES (G) to attach the gate. Once positioned, you can tighten the CARRIAGE BOLTS (L) of the MALE HINGES (F). Finally, cover the entire GATE DOOR with your fence mesh (NOT INCLUDED) and fasten the mesh to the GATE **DOOR** using **SELF-LOCKING** TIES (O). Trim excess material as needed.

**Note:** You do not need a tie for every square on the mesh. We recommend 1 tie for every 1' along the pipe of the gate door.
