Dog Fence Sleeved Access Gate Installation Instructions

1.

1. Layout two (2) GROUND

SLEEVE (P) where you would like your access gate to go on your fence line. Using the table below, measure out your gate distance between your post going from the INSIDE edge of one GROUND SLEEVE (P) to the INSIDE edge of the opposite GROUND SLEEVE (P).

Note: It is EXTREMELY important to double check the measurement between the SLEEVES (P) before proceeding with the next step as it can be difficult to remove the sleeves once in the ground.

Gate Width	Distance between
	sleeves– INSIDE
	EDGE TO INSIDE
	EDGE
3' Gate	40 ¼"
4' Gate	52 ¼"
5' Gate	64 ¼"
6' Gate	76 ¼"
7' Gate	88 ¼"

Measure based on gate width. Cross-reference table for exact distance.

2. Using a DRIVE CAP (Sold Seperately; SKU: DE2812) and a sledgehammer, drive the GROUND SLEEVES (P) into the ground where previously measured, leaving ½" above ground to keep out debris and allow for securing the post. Care should be taken to ensure that the sleeves are as straight as possible.

Note: On hard ground it may be necessary to use an EARTH AUGER (Sold Separately; SKU: DE8189) or DIGGING BAR to make a hole before driving the ground sleeves in.

5. After the band is installed, place your **BRACE POST (E)** into the **BRACE CUP (B)** in line with the fence line. Use the table below to measure out from the post where to place your ground sleeve.

5.

Fence Height	Distance from
	Post
3'	95"
4'	91"
5'	85.5"
6'	77.5"

Note: The measurement to determine where the ground sleeve needs to go is an estimate. Measurement may change based off uneven terrain and final layout. Dry fit all parts together from STEPS 4-7 before finalizing ground sleeve placement.

Once the GROUND SLEEVE

 (P) is in place, see STEP 3 for inserting the LINE POST (N) into the GROUND SLEEVE
 (P). Attach a BRACE BAND
 (A) and BRACE CUP (B), see STEP 4, to the BOTTOM of the LINE POST (N).

7. Insert the BRACE POST (E) into the bottom BRACE CUP (B) of the LINE POST (N).

Secure the BRACE POST (E) by drilling a SELF-TAPPING SCREW (J) through both BRACE CUPS (B) and BRACE POST (E). Once secured, tighten the CARRIAGE BOLT (M) on both BRACE BANDS (A). Repeat steps 5-6 for second BRACE POST (E) and LINE POST (N).

Note: Based on the height of your system, you will have to adjust the bottom **BRACE BAND AND CUP** to account for the angle of the **BRACE POST (E)**.

8. Insert VERTICAL GATE DOOR POST (B) into CORNER **ELBOW (C).** Then slide in the **HORIZONTAL GATE DOOR POST (C)** into the **CORNER ELBOW (C)** so that it presses tightly against the VERTICAL POST (B). Secure the POSTS inside the **CORNER ELBOWS** (C) using SELF-TAPPING **SCREWS (J).** Finally, attach the **CENTER BAR (D)** on both sides of the **VERTICAL GATE** POSTS (B) with an END **CLAMP (D)** on either end. Secure the END CLAMP (D) in place with a **CARRIAGE BOLT (K)** on the **CENTER** of each VERTICAL GATE POST (B).

9. Open the TURNBUCKLE (E) by twisting both ends. Place the hook end of one TURNBUCKLE (E) through the hole in one top **CORNER ELBOW (C)** and stretch the cable diagonally to the hole in the bottom **CORNER** ELBOW (C). Pass the cable through the **CONNECTION** CLIP (I) and then through the hole in the **CORNER ELBOW** (C). Pass the end of the cable through the **CONNECTION CLIP (I)** again. Position the **CONNECTION CLIP (I)** close to the **CORNER ELBOW (C)** and tighten using the small nuts. Repeat on the opposite side creating an "X" across the gate. Evenly tighten the TURNBUCKLES (E) on each side to keep the gate square.

9.

10. On one side of the newly assembled gate door, measure 12" from the TOP and 12" from the BOTTOM of the door. Attached the FEMALE HINGE (G) at these marked points with a CARRIAGE BOLT (L). On the opposite side of the gate door, attach the FORK LATCH (H) at the same height as the FEMALE HINGES (G); 12" from the TOP and 12" from the BOTTOM.

Note: You can attach the hinges and latches to either side of the door frame to accommodate which way it will open in the system.

11. Attach the MALE HINGES (F) to one side of the **FRAME POST (N)** and secure them with a **CARRIAGE BOLT (L)**. Do not tighten the bolts completely. Position the **GATE DOOR** on the **INSIDE** of the **FRAME POSTS (N)** at the desired height, then slide the MALE HINGES (F) up into the FEMALE HINGES (G) to attach the gate. Once positioned, you can tighten the CARRIAGE BOLTS (L) of the MALE HINGES (F). Finally, cover the entire **GATE DOOR** with your fence mesh (NOT INCLUDED) and fasten the mesh to the GATE **DOOR** using **SELF-LOCKING** TIES (O). Trim excess material as needed.

Note: You do not need a tie for every square on the mesh. We recommend 1 tie for every 1' along the pipe of the gate door.
