WASHING MACHINES

Supco 88 is the answer to stuck or seizing tub shaft and water pump shaft problems. A few drops in the bearing surfaces will clear the trouble. Follow with a mixture of **Supco 88** and lubricating oil.

PENETRATING OIL

Penetrates everything and anything. You never used a penetrant like **Supco 88**. Penetrates like no other product in the world. Try this remarkable penetrant and be convinced.

LAWN MOWERS & OUTBOARD ENGINES

Just add a few ounces of **Supco 88** to all two cycle engines and notice the new smooth purring sound it makes. Adds power to your valves better than ever before.

Perfect for all four cycle and inboard boat engines. Protects against all corrosive actions.

COMPATIBLE WITH ALL REFRIGERATION OILS

SUPCO 88

SHOULD BE USED
IN EVERY
COMPRESSOR AND MOTOR
FROM A SEALED UNIT
TO THE LARGEST
INDUSTRIAL MACHINE

SINCE 1945 REFRIGERATION WHOLESALERS HAVE BEEN STOCKING & SELLING "SUPCO 88".

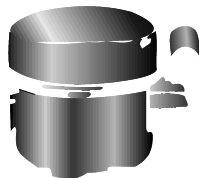

Supco 88 is a special oil additive formula designed to be added to all oils. It is "liquid dynamite" and ready for action in every compressor and motor. **Supco 88** is used in hermetic, belt driven and automotive compressors. **Supco 88** is also used for expansion valves, capillaries, autos, trucks, lawn mowers, inboard and outboard engines and is a powerful penetrating oil. **SUPCO 88** REDUCES FRICTION 46.7%!

ADD ONE TO NINE PARTS OF OIL IN HERMETICS - BELT DRIVEN - (ANY TONNAGE)

Increases lubricity in high speed compressors. Reduces amperage through friction control. Prevents overloading in new units that require "running in time". Keeps compressors clean and removes sludges that have already formed. Completely soluble with all oils. Can remain in the system permanently.

HERMETICS - Completely safe with all types winding insulation.

BELT DRIVEN - (any tonnage) Prevents excessive wear on belts due to seizing bearings. Frees sticky and stuck compressors.

BLOWER MOTORS - ROOM AIR CONDITIONER MOTORS, ELECTRIC MOTORS (ANY H.P.)

One of the most successful applications of **Supco 88** is the freeing of motor shafts that have become stuck or seizing in the bearings. A few drops **Supco 88** directly into the bearing will free the shaft almost instantly. Follow mixture of **Supco 88** and motor oil (one part **Supco 88** to nine parts motor oil) and the problem is solved. Use same mixture on all motors running in high humid conditions to prevent sludge accumulations on bearing surfaces. Removes gummy substances from bearings.

EXPANSION VALVES AND CAPILLARIES One part **Supco 88** to nine parts of refrigeration oil in a system will prevent excess wear on expansion valve needles and seats. **Supco 88** penetrates the pores of all moving metal parts of the expansion valve and keeps them constantly lubricated, preventing and correcting erratic action. **Supco 88** is the only oil additive recommended by manufacturers of "Cap Tube Cleaners" to clear restrictions and keep them clean.
