# ECOConnector™

ECOConnector™ MM2/SM2-LC Quick Start

Actual installation procedure may vary; please consult the manual and/or video for your specific connector model.
**Tools Required: 3-hole stripper, Kevlar sheers, cleaver, ruler, marker**
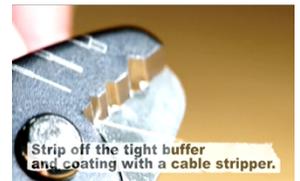

|			
Insert the connector boot onto the cable	Strip outer jacket about 50mm to reveal 900-micron fibers	Using the label, measure from the end of the buffer and make a mark between the 250µm and 125µm section	Strip the buffer to the mark using the middle hole, then the small hole on the stripper in short increments
Cleave your fiber strand to 10mm from the mark	Strip the remaining 20mm of buffer using the middle hole on the stripper	Clean any impurities from your cable using alcohol and a lint-free cloth	Insert the fiber into the connector body until the strand meets resistance and bows slightly
Remove the connector jig	Lock the fiber inside the connector by pressing the amber button	Screw the boot onto the connector body and trim any exposed Kevlar yarn	To remove or re-terminate the connector, simple unscrew the boot and replace the jig
